

What is SpecsIntact?

Our name represents our purpose...

"Specifications kept **intact**."

In other words, we're an automated system that utilizes standardized facility construction specifications.

Used worldwide by the National Aeronautics and Space Administration (NASA), the U.S. Naval Facilities Engineering Command (NAVFAC), and the U.S. Army Corps of Engineers (USACE), SpecsIntact makes it possible to assure quality control for project specifications from beginning to end.

The SpecsIntact system -- designed by NASA and managed at the Kennedy Space Center -- is used by engineers, architects, specification writers, project managers and construction managers doing business with the three supported agencies.

Using SpecsIntact reduces the time and expense required to produce facility specifications, and helps eliminate costly construction changes due to omissions, discrepancies or improper quality controls.

What makes SpecsIntact Unique?

It's more than just software...

The SpecsIntact web site provides both information and downloads for SpecsIntact, as well as links to the Masters, agency web sites, and contacts.

SpecsIntact and the Masters are also distributed by the National Institute of Building Sciences on their Construction Criteria Base CD.

SpecsIntact is a **system** that consists of two main components: **SI Explorer** and the **SI Editor**. Through the Explorer, you accomplish all the project management — creating new projects and processing completed ones.

SpecsIntact utilizes Master guide specifications prepared by the agencies, which is at the heart of what makes the system unique. Using these Masters, you adapt their content to your project by editing them in the SI Editor. Then by processing the edited specifications from the SI Explorer, you produce the quality assurance reports that are key to delivering accurate specifications.

SpecsIntact is designed for use with Master text that conforms to the Construction Specification Institute's (CSI) format.

How is SpecsIntact able to check the accuracy of the various elements within the specifications? By utilizing a special tagging system similar to the one that tells a web browser how to display a web page. It is this tagging that enables the system to produce reports and other automated features, reducing the time required to complete your project. The quality assurance reports verify the accuracy of technical references, submittals, and other requirements.

A Brief SpecsIntact History

Milestones from the last 38 years...

- ◆ **1965** — Conceived by NASA
- ◆ **1976** — Converted to GE system
- ◆ **1977** — Converted to Q1 Micro
- ◆ **1985** — Converted to IBM
- ◆ **1986** — Adopted by NAVFAC
- ◆ **1988** — Adopted by USACE
- ◆ **1992** — Converted to Windows platform
- ◆ **2002** — Converted to 32-bit application

Today, SpecsIntact continues to grow and serve NASA, Army, and Navy customers worldwide through our operations at the Kennedy Space Center.

The SpecsIntact team consists of software developers who work to constantly improve the product, and our technical support specialists who provide unparalleled customer support to a worldwide user base.
